

## *Setting up Eudora 6.0.2 (for MAC OS X 10.2 and higher) to retrieve your email*

(To modify your settings for the new email system, go to page 7 for [POP](#) or [IMAP](#)).

---

To set up Eudora 6 as a client for the first time, use the following instructions:

### **EUDORA 6 (Download Eudora 6 to your desktop)**

1. If you already have Eudora 6 on your desktop, go to step 13, otherwise go to [www.eudora.com/email/index.html](http://www.eudora.com/email/index.html) to download it.

2. Click on  to download the application to your desktop.
3. Click on the applicable download for your PC:

Eudora for  
Windows

Eudora for  
Mac OS X and  
higher

Eudora for  
Mac OS 9

[Download Eudora 6.0.1](#) [Download Eudora 6.0.2](#) [Download Eudora 6.0.2](#)

4. After Eudora downloads, close the **Downloads** box.
5. Close the **Eudora Download** box.
6. Navigate to Eudora 6.0.2.OSX and double click on it to begin the install.
7. Click **Continue**.
8. On the **Eudora 6.0.2 OSX Read Me** page, click **Continue**.
9. On the **Software License Agreement** page, click **Agree**.
10. On the **Eudora 6.0.2 OSX** page, click **Install**.
11. On the **Choose a Folder** page, click **Open**.
12. At the **Installation was successful** message, click **OK**.

13. Go to the **Application** Folder and click on **Eudora**.
14. Select **Special**; select **Settings**.
15. Select **Getting Started**.
16. Enter/verify your login name (auser001) in the Username field.

17. Enter/verify your Mail Server. This should be `umnet.umaryland.edu`
18. Enter/verify your Real Name (auser).
19. Enter/verify the SMTP **Server** depending upon how you connect to the Internet:
  - If you are on-campus, you should enter **umnet.umaryland.edu**
  - If you are using another Internet Service Provider (ISP), you will need to use their outgoing (or SMTP) mail server; you can obtain the information by contacting the ISP. For example, Comcast High Speed Internet outgoing server would be **smtp.comcast.net**
20. Enter/verify the return address (`auser001@umaryland.edu`).
21. Choose whether you want to **Make Eudora the default Mailer**.
22. Select **Checking Mail**.
23. You can select either a POP or an IMAP connection to check your email. We recommend using an IMAP connection (on or off-campus) in order to ensure your mail is available from multiple locations.

POP (POP3)	IMAP
Messages are downloaded to your computer.	Keeps your messages on the Open WebMail server.
It's not necessary to stay connected while reading messages.	Must stay connected to the Open WebMail server while reading/sending messages.
Since messages are stored on your computer, they do not count against your quota.	Since messages are stored on the Open WebMail server, they count against your quota.
You cannot read mail from any folder in your account other than your Inbox folder.	You can read and manipulate mail in any folders in your account.
You can manipulate messages and folders on your computer at any time (even when disconnected). However, those folders are not available elsewhere.	Messages can be arranged in folders on the Open WebMail server, which are then available from any location.
Once messages are downloaded to your computer, they are not longer accessible from other locations or Open WebMail.	Since messages are stored on the Open WebMail server, they are still accessible through other IMAP mail clients or Open WebMail.

- For [POP](#) instructions, go to page 3.
- For [IMAP](#) instructions, go to page 5.

# Setting Up Eudora 6 to retrieve your email

---

## POP - Continued:

- Enter/verify your **Username (auser001)**.
- **Mail Server** should be **umnet.umaryland.edu**
- For **Mail Protocol**, choose **POP**.
- For **Authentication**, choose **Passwords**.
- Under **Connection**, check:
  - **Check for mail every minutes** box and **enter** your preference. For example **5** minutes.
  - **Send on check**.
- Under Mail Management, if you want to leave mail on the server, check **Leave on server for your preference days**.
- Select **Sending Mail**.
- For **Return address**, enter/verify your UMnet address ([auser001@umaryland.edu](mailto:auser001@umaryland.edu))
- Leave the **Default Domain** blank.
- Under the **Connection Section**, check the following boxes:
  - Immediate send
  - Send on check
  - Use separate thread for sending
- Under the **Message Section**, check the following boxes:
  - Fix curly quotes
  - Keep copies
- Select **Personalities**.
- Verify the **Personality**. If you are just using one account with Eudora, simply verify the personality to be **Dominant**.
- Under **Checking Mail** and **Sending Mail**, the information should be the same as mentioned above.
- If you need more than one account configured in Eudora – please click here for setup instructions [http://www.eudora.com/techsupport/tutorials/mac\\_personalities.html](http://www.eudora.com/techsupport/tutorials/mac_personalities.html), then you can create filters to move email to different mailboxes [http://www.eudora.com/techsupport/tutorials/mac\\_filters.html](http://www.eudora.com/techsupport/tutorials/mac_filters.html)
- Select **Personality Extras**.
- Verify **Personality** is **Dominant**.
- Under **Checking Mail** and **Sending Mail**, the information should be the same as mentioned above.
- Select **SSL**.
- Verify **Personality** is **Dominant**.
- For **SSL for POP**, choose **Required (Alternate Port)**.
- For **SSL for SMTP**, choose **Optional (TLS)**.
- For **SSL for IMAP**, choose **Required (Alternate Port)**.
- Under **Standard Port SSL Negotiation**, select **Maximum Compatibility**.
- Under **Alternate Port SSL Negotiation**, select **TLS 1.0**.

- Click on **Ports and Protocols**.  
If you do not have **Ports and Protocols**, follow the directions below.  
If you do have, skip to the **Ports and Protocols Setup** below.
- Click **OK**.
- Quit **Eudora**.
  
- Open **Applications/Eudora Application Folder**.
- Control-Click **Eudora**.
- Select **Show Package Contents** from the contextual menu.
  
- In **Finder**, select **View**. Select **as List**.
  
- Open the **Plugins Disabled** folder.
  
- Copy the **Esoteric Settings 6.0** file into the **Plugins** folder.
  
- Close the **Eudora** window.
  
- *Launch Eudora.*
- Select **Special**; select **Settings**.
- Select **Ports & Protocols**.
- Make sure **Normal method** is checked.
  
- Enter/verify the value for **POP3 Port** is **995**.
  
- Enter/verify the value for **SMTP port** is **25** (unless your **SMTP Server** requires otherwise).
  
- Enter/verify the value for **IMAP port** is **993**.
  
- Take the default values for the remaining ports.
  
- Click **OK**.
  
- *Launch Eudora.*
- Compose a new e-mail message.
- Enter the following in the message:
 

<x-eudora-setting:32457=768>
- Double-click on the text.
- Click the "Set Setting" button.
- Close the e-mail message (Do not send it).

Congratulations! You have completed your setup for POP using Eudora 6.
