Short Title: Use of genetically engineered porcine organs and tissues  
Investigator: Muhammad Mohiuddin  
ID: IBC-00006063  
Analyst: John O'Neill  
VA-Related: No  
Discussion: This modification involves the use of tissues and organs from previously generated transgenic animals in those same animals (autologous transplants). This work is classified by the NIH Guidelines for Research with Recombinant or Synthetic Nucleic Acids as III-D-4-a using ABSL-1 facilities and practices. The following modifications are required to secure approval: 1) Add clarifying sentences to the experimental design so that it can be more readily understood by non-scientists and 2) Make it more explicit that these transgenic animals are generated elsewhere.
